

Madmans Esprit

Album Tour

Madmans Esprit is a South Korean visual kei-influenced extreme metal band, known for combining emotionally driven narratives with a diverse range of musical elements within an extreme metal framework.

Their sound is rooted in black metal while incorporating traditional melodic sensibilities, as well as elements of folk and classical music. Rather than functioning as a simple genre fusion, these elements are structurally integrated into the compositions, shaping both the musical flow and emotional dynamics.

In recent years, the band has expanded both its international presence and listener base. With approximately 55,000 monthly listeners on Spotify, Madmans Esprit has built a global audience.

Their European headlining tour covered 10 cities, reaching a total audience of approximately 4,500 attendees. The tour saw multiple sold-out shows across several countries, including the UK, Germany, Finland, Poland, and Romania, reflecting strong and geographically diverse demand.

At the same time, the band has maintained a consistent live presence in Japan, particularly in Tokyo, strengthening its position within the visual kei scene, while continuing to grow its recognition in Korea.

Madmans Esprit is currently planning larger-scale European tours year by year, building on its established live presence in Europe and Japan and continuing to expand as an international touring act.
